

Email

Electronic Correspondence & Communication Record

CORRESPONDENCE TYPE

What is an Email in Project Correspondence?

An Email is a digital form of formal or semi-formal correspondence used to communicate information, instructions, queries, or decisions between project stakeholders. When used in a professional or contractual context, emails carry the same weight as written letters and must be properly documented and archived.

Document Code:	EML-XXXX
From:	Sender's email address and name
To:	Primary recipient(s)
CC:	Copied recipients (for awareness)
BCC:	Blind-copied recipients (confidential)
Subject:	Clear, descriptive subject line
Date & Time:	Automatically recorded by email system
Attachments:	Referenced documents or files

Key Elements of a Formal Email

- Professional Subject Line — Specific and searchable
- Formal Salutation — Appropriate greeting for the recipient
- Clear Body — Purpose stated in the first paragraph
- Action Required — Explicit requests or deadlines highlighted
- Attachments Reference — Mentioned in the body text
- Professional Sign-off — Name, title, and contact details in signature
- Email Thread Management — Reply-all etiquette and thread preservation

Best Practices

- Use a professional email address associated with the organisation
- Keep subject lines under 60 characters for clarity
- Archive project-related emails in a structured folder system
- Avoid using email for sensitive contractual decisions without follow-up letters
- Acknowledge receipt of important emails within 24 hours
